

[Dashboard](#)[my courses](#)[AMCN SS 2022](#)[IEEE 802.11](#)[Quiz: IEEE 802.11 - Newer Developments and Physical Variants](#)

Started at	Sunday, April 24, 2022, 2:52 p.m
status	Completed
Finished at	Sunday, April 24, 2022, 2:55 p.m
Spent time	2 minutes 58 seconds
feedback	Congratulations, your performance was very good (80%-90%).

question **1**

Complete

Achievable
points: 1.00

What are advantages of using higher frequencies?

Choose one or more answers:

- ☐ a. High bandwidth available
- ☒ b. Typically less crowded bands
- ☒ c. Availability of unused spectrum
- ☒ i.e. Smaller fading due to higher frequency
- ☐ e. Lower path loss

question **2**

Complete

Achievable
points: 1.00

What are typical disadvantages of using higher frequencies?

Choose one or more answers:

- ☒ a. Higher loss for non-line-of-sight transmissions
- ☐ b. Lower bandwidth available
- ☒ c. Higher loss for penetrating obstacles
- ☐ i.e. Higher interference
- ☐ e. Stronger fading

question **3**

Complete

Achievable
points: 1.00

Which techniques are used in 802.11ac to maximize the throughput?

Choose one or more answers:

- ☐ a. Microwave frequency
- ☒ b. Higher bandwidth of channels
- ☒ c. Parallel transmissions to multiple mobiles at the same time
- ☒ i.e. Higher modulation schemes
- ☐ e. Cognitive radio technology

question **4**

Complete

Achievable
points: 1.00

Which techniques are used in 802.11g to adapt to varying channel quality?

Choose one or more answers:

- ☐ a. adaptive antennas
- ☐ b. adaptive backoff times
- ☒ c. adaptive modulation schemes
- ☒ i.e. adaptive coding
- ☐ e. adaptive transmit power

question **5**

Complete

Achievable
points: 1.00

Why does the maximum throughput in 802.11a depend on the distance between the stations?

Choose one or more answers:

- ☒ a. Received signal strength decreases over distance
- ☒ b. SINR decreases over distance
- ☒ c. Pathloss increases over distance
- ☐ i.e. Received interference increases over distance
- ☐ e. Average error rate increases over distance

question **6**

Complete

Achievable
points: 1.00

Why is the transmit power typically limited to 100 mW?

Choose one or more answers:

- ☐ a. To avoid overheating of terminals
- ☒ b. To reduce the risk of collisions
- ☒ c. To reduce interference inside the ISM band
- ☐ i.e. To avoid interference to licensed bands
