Frage **1**

Vollständig

Erreichbare

Punkte: 1,00

What are advantages of CDMA?

Wählen Sie eine oder mehrere Antworten:

- ☒ a. All terminals can use the same frequency, less planning needed
- ☒ b. Noise is not coded
- ☒ c. Forward error correction and encryption can be easily integrated
- ☒ d. Huge code space compared to frequency space
- ☐ e. Low complexity of receivers

Frage 2

Erreichbare
Punkte: 1,00

What is the advantage of CDMA with respect to the handling of noise?

Wählen Sie eine oder mehrere Antworten:

- ☒ a. CDMA supports useful communication with a much lower SINR compared to other techniques
- ☒ b. Noise is not coded and thus, its impact on the signal is reduced
- ☐ c. CDMA requires higher SINR due to the overlap of different transmission on same frequency in same time

Frage 3

Erreichbare
Punkte: 1,00

What is the trick with CDMA to avoid collisions?

Wählen Sie eine oder mehrere Antworten:

- ☒ a. All users share same frequency, but each user has own "chipping" sequence (i.e. code) to encode data, which allows multiple users to coexist and transmit simultaneously with minimal interference
- ☐ b. All users use different transmission channels, which are defined by pseudo random codes
- ☐ c. All users share same frequency, but each user has own pseudo random code, which defines its timeslot for transmission

Frage 4

Erreichbare
Punkte: 1,00

Which statement is correct for CDMA?

Wählen Sie eine oder mehrere Antworten:

- ☒ a. The code imposed on the data has a much higher rate as the data itself
- ☒ b. All terminals use the same frequency band at the same time
- ☐ c. All terminals use separate timeslots in the same frequency band
- ☐ d. All users use the same pseudo random spreading code in the same timeslot
- ☒ e. Each user has a unique pseudo random code

Frage 5

Vollständig

Erreichbare
Punkte: 1,00

Why is power control important for the correct function of CDMA?

Wählen Sie eine oder mehrere Antworten:

- ☐ a. It helps to reduce the impact of Exposed Terminal Problem
- ☐ b. It helps to reduce the impact of Hidden Terminal Problem
- ☒ c. It is important to reduce the impact of the Near-Far Problem
- ☒ d. Unbalanced received power levels combined with imperfect spreading codes with limited orthogonality will cause errors in detection
- ☐ e. Unbalanced transmit power levels will always cause errors in detection
