

[Dashboard](#)[my courses](#)[AMCN SS 2022](#)[mobility management](#)[Quiz: Mobility Management - Link Layer Mobility](#)

Started at	Sunday, May 1, 2022, 7:15 p.m
status	Completed
Finished at	Sunday, May 1, 2022, 7:21 p.m
Spent time	5 minutes 16 seconds
feedback	Congratulations, excellent performance (90-100%).

question **1**

Complete

Achievable
points: 1

Identify ideas how handovers could be accelerated:

Choose one or more answers:

- ☒ a. Change to a new channel before the radio link on the current channel breaks
- ☒ b. Try to stay connected to multiple radio links (APs) at the same time so that there is a redundant link whenever another one fails
- ☒ c. Provide the AP with radio information so that it can initiate the handover before the current link fails
- ☒ i.e. Scan the medium for other APs before the actual radio link breaks (possibly using extra HW)

question **2**

Complete

Achievable
points: 1

What are the main sources for handover delay in WLANs?

Choose one or more answers:

- ☐ a. The time needed to authenticate with newly identified APs
- ☒ b. The time required to receive beacons on all channels to identify APs
- ☒ c. The time needed to go through all channels with possible APs
- ☐ i.e. The process to search for a new channel to scan
- ☐ e. The time the mobile needs to decide for an appropriate channel to scan

question **3**

Complete

Achievable
points: 1

What happens if a mobile moves out of WLAN coverage?

Wählen Sie eine oder mehrere Antworten:

- ☐ a. The mobile informs the old AP of its radio problems prompting the AP to search for another AP
- ☐ b. The old AP informs the mobile about the channels of the new AP to be scanned
- ☐ c. The mobile identifies a decreasing SINR which prompts it to search for a new AP autonomously
- ☒ d. The mobile searches for a new AP after identifying that no communication is possible anymore
- ☐ e. The AP is the responsible entity for the handover management

Frage **4**

Vollständig

Erreichbare
Punkte: 1

Which mobility problems can be handled on the link and PHY layer?

Wählen Sie eine oder mehrere Antworten:

- ☐ a. Mobiles moving between different IP subnets
- ☒ b. Mobiles moving within the switched layer 2 network
- ☒ c. Mobiles moving within a single IP subnet
